Software Development Fundamentals Visual Basic

PROJECTS

CRUD Application – Student Group Project

Duration: 1 month

Contribution: Created and designed GUI and required SQL queries /C# functions for items window.

Technologies/Software used: C#, SQL, Microsoft Access, and Visual Studio Enterprise

Result: CRUD invoice/inventory management system.

Browser Based Game – Student Individual Project

Duration: 2 weeks

Technologies/Software used: PHP, MySQL, Bootstrap, HTML5, CSS3, SHA256 hashing, PhpStorm, password salting, user account creation, and account authentication.

Result: High or Low game that uses server-side code to generate a random number in which the user tries to guess. If the user guesses the correct number the server code records the number of guesses the user took and places it in a top 10 score table if applicable, that the user can see a view of from the website.
